

Streamlining Ticket Assignment for Efficient Support Operations

Team Leader : RAJALAKSHMI M

Team member : RITHAJ BEGAM A

Team member : SAMSATH BANU M

Team member : SARANYA K

1. Identification Phase

The Identification Phase focuses on recognizing problems in the current support ticket management system. In many organizations, tickets are manually assigned, which leads to delays, misrouting, and inefficient use of support staff.

- Identify inefficiencies in the current ticket assignment process.
- Understand the impact of delays on customer satisfaction.
- Recognize the need for automation and intelligent ticket routing.

2. Requirement Analysis

Requirement Analysis involves understanding what the system needs to accomplish to solve the identified problem.

Functional Requirements

- Automatic ticket categorization.
- Skill-based ticket assignment.
- Priority-based routing.
- Ticket escalation mechanism.
- Dashboard for monitoring ticket progress.

Non-Functional Requirements

- High system reliability.
- Fast processing speed.
- Scalability to handle large volumes of tickets.

- Secure data handling.

3. Project Planning Phase

The planning phase defines how the project will be executed.

Key Activities

- Define the project scope.
- Identify resources required.
- Set project timeline and milestones.
- Assign roles and responsibilities.
- Identify potential risks.

4. Project Development Phase

The development phase involves building the actual system based on the planned design and requirements.

Development Tasks

- Build ticket submission module.
- Develop automatic ticket classification system.
- Implement ticket routing engine.
- Create escalation logic for unresolved tickets.
- Develop monitoring dashboard.

Example Technologies

- Backend: Python / Node.js
- Database: MySQL / PostgreSQL
- Frontend: Web Dashboard (React or similar)

5. Project Design Phase

The design phase focuses on defining how the system will work and how its components will interact.

System Design Components

- System architecture diagram.
- Database design for storing ticket information.
- Workflow design for ticket routing.
- User interface design for support agents.

6. Project Documentation

Documentation ensures that the system can be easily understood, maintained, and used by future users and administrators.

Documentation Includes

1.Create User

Form titled "User - Manne Niranjan" with the following fields and options:

- User ID: manne.niranjan
- First name: Manne
- Last name: Niranjan
- Title: (empty)
- Department: (empty)
- Email: niranjanreddymanne2507@gr
- Language: -- None --
- Calendar integration: Outlook
- Time zone: System (America/Los_Angeles)
- Date format: System (yyyy-MM-dd)
- Business phone: (empty)
- Mobile phone: (empty)
- Photo: Click to add...
- Options:
 - Password needs reset: ☐
 - Locked out: ☐
 - Active: ☒
 - Web service access only: ☐
 - Internal Integration User: ☐
- Buttons: Update, Set Password, Delete

Form titled "User - Katherine Pierce" with the following fields and options:

- User ID: Katherine Pierce
- First name: Katherine
- Last name: Pierce
- Title: (empty)
- Department: (empty)
- Email: (empty)
- Language: -- None --
- Calendar integration: Outlook
- Time zone: System (America/Los_Angeles)
- Date format: System (yyyy-MM-dd)
- Business phone: (empty)
- Mobile phone: (empty)
- Photo: Click to add...
- Options:
 - Password needs reset: ☐
 - Locked out: ☐
 - Active: ☒
 - Web service access only: ☐
 - Internal Integration User: ☐
- Buttons: Update, Set Password, Delete

5. Assign roles & users to platform group

Access Control
u_operations_related

Definition

Access Control Rules allow access to the specified resource if all three of these checks evaluate to true:

1. The user has one of the roles specified in the **Role** list, or the list is empty.
2. Conditions in the **Condition** field evaluate to true, or conditions are empty.
3. The script in the **Script** field (advanced) evaluates to true, or sets the variable "answer" to true, or is empty.

The three checks are evaluated independently in the order displayed above.

9.Create Actions

7. Project Demonstration

The demonstration phase showcases the completed system and its functionality to stakeholders.

Demonstration Steps

1. Show the ticket creation process.
2. Demonstrate automatic ticket categorization.
3. Display automatic ticket assignment.
4. Show monitoring dashboard.
5. Explain escalation and priority handling.
